

TRY and CATCH

Try Catch yordamida php kodlarimizdagi xatoliklar, error larni ushlashimiz mumkin Bir vazifani bajarayotganda xat olik sodir bo'ladi. Xatolik sodir bo'lganda xatolik "oti b" yuboriladi. Bu xatolikni "ushlab olish" kerak. throw yordamida xatolik otiladi TRY CATCH yordamida otilgan xa tolik ushlanadi TRY va CATCH bloklaridan tashkil topgan bo'ladi.

```
Misol: function inverse($son) { return 1/$son; } echo in  
verse(5); // Natija: 0.2 echo inverse(0); //Natija: Xato  
lik: Warning: Division by zero in... function inverse($s  
on) { if ($son == 0) { throw new Exception('Division by  
zero.')} } return 1/$son; } echo inverse(0); //PHP Fatal  
error: Uncaught Exception: Division by zero. //try catch  
yordamida xatolikni ushlab olamiz try { echo inverse(0);  
} catch (Exception $e) { print_r($e); echo 'Caught excep  
tion: ', $e->getMessage(), "\n"; } Exception Object ( [m  
essage:protected] => Division by zero. [string:Exceptio
