

PREPARE

```
prepare() bindParam() execute()
```

INSERT

```
$insert = "INSERT INTO talaba (firstname, lastname, email) VALUES (?, ?, ?);"; $stmt = $conn->prepare($insert); try{ $stmt->execute(['Sardor', $lastname, 'dsq2190@gmail.com']); }catch (Exception $e){ print_r($e->getMessage()); }
```

Heading 3

```
$stmt = $conn->prepare("INSERT INTO talaba (firstname, lastname, email) VALUES (:firstname, :lastname, :email)"); $stmt->bindParam(':firstname', $firstname); $stmt->bindParam(':lastname', $lastname); $stmt->bindParam(':email', $email); // insert a row $firstname = "John"; $lastname = "Doe"; $email = "john@example.com"; $stmt->execute(); // insert another row $firstname = "Mary"; $lastname = "Moe"; $email = "mary@example.com"; $stmt->execute(); // insert another row $firstname = "Julie"; $lastname = "Dooley"; $email = "julie@example.com"; $stmt->execute();
```

```
$data = [ ':firstname'=>$firstname, ':lastnam  
e'=>$lastname, ':email'=>$email', ]; $stmt->  
execute($data);
```

UPDATE

PHP

 Copy

```
$sql_update = "update talaba set firstname=:  
firstname where id=:id"; $prepare = $conn->p  
repare($sql_update); $prepare->bindParam(':f  
irstname', $firstname); $prepare->bindParam  
(':id', $id); $firstname = "Jasur"; $id = 1  
9; $prepare->execute();
```

DELETE

```
$sql = "DELETE FROM talaba WHERE id=:id"; $p  
repare = $conn->prepare($sql); $prepare->bin  
dParam(':id', $id); $prepare->execute($sql);
