Bazaga ma'lumot qo'shish (INSERT)

MySQLi da

```php
$sql_insert = "INSERT INTO dars2.talaba (firstname, lastname, email, registered_at) VALUES ('Sardor', 'Dushamov', 'dsq2190@gmail.com', '2020-01-28 16:03:42');"; //MySQLi if ($conn->query($sql_insert) === TRUE) { echo "Insert qilindi"; } else { echo "Jadval hosil qilishda xatolik: " . $conn->error; } $conn->close();
```

PDO da

```php
$sql_insert = "INSERT INTO dars2.talaba (firstname, lastname, email, registered_at) VALUES ('Sardor', 'Dushamov', 'dsq2190@gmail.com', '2020-01-28 16:03:42');"; //PDO try { $conn_pdo->exec($sql_insert); echo "Insert qilindi"; }catch(PDOException $e) { echo "Insert qilishda xatolik1:" . $e->getMessage(); }
```

Bir vaqtni o'zida birnechta ma'lumot

MySQLi da

multi_query() - funksiyasi yordamida amalga oshirish mumkin

```php
$sql_insert = "INSERT INTO dars2.talaba (firstname, lastname, email, registered_at) VALUES ('Sardor', 'Dushamov', 'dsq2190@gmail.com', '2020-01-28 16:03:42');"; $sql_insert .= "INSERT INTO dars2.talaba (firstname, lastname, email, registered_at) VALUES ('Sardor1', 'Dushamov1', 'dsq2190@gmail.com', '2020-01-28 16:03:42');"; $sql_insert .= "INSERT INTO dars2.talaba (firstname, lastname, email, registered_at) VALUES ('Sardor2', 'Dushamov2', 'dsq2190@gmail.com', '2020-01-28 16:03:42');"; //MySQLi if ($conn->multi_query($sql_insert) === TRUE) { echo "Insert qilindi"; } else { echo "Jadval hosil qilishda xatolik: " . $conn->error; } $conn->close();
```

PDO da

```php
$conn_pdo->exec($sql_insert);
```

lastInsertId()

So'nggi kiritilgan qator yoki ketma-ketlik IDsini qaytaradi

```php
PHP                                    Copy
$sql_insert = "INSERT INTO talaba (firstname, lastname, email, registered_at) VALUES ('Sardor', 'Dushamov', 'dsq2190@gmail.com', '2020-01-28 16:03:42');"; $conn->exec($sql_insert); echo $conn->lastInsertId();
```
