Fayl yuklash

Fayl yuklash uchun HTML da forma hosil qilamiz

```
<!DOCTYPE html> <html> <body> <form action="upload.php" method="post" enctype="multipart/form-data"> Rasm tanlang: <input type="file" name="image"> <input type="submit" value="Rasm yuklash"> </form> </body> </html>
```

Endi upload qilish ishlarini bajaradigan php kod yozamiz

```php
$upload_folder = "uploads/"; if (isset
($_FILES['image'])) { if(!is_dir($uploa
d_folder)) mkdir($upload_folder); $erro
rs = array(); $file_name = $_FILES['ima
ge']['name']; $file_size = $_FILES['ima
ge']['size']; $file_tmp = $_FILES['imag
e']['tmp_name']; $file_type = $_FILES
['image']['type']; $file_format_arr = e
xplode('.', $_FILES['image']['name']);
$file_ext = strtolower(end($file_format
_arr)); $extensions = array("jpeg", "jp
g", "png"); if (in_array($file_ext, $ex
tensions) === false) { $errors[] = "Fay
l formati JPEG yoki PNG bo`lishi kera
k."; } if ($file_size > 2097152) { $err
ors[] = 'File hajmi 2 MB dan katta bo`l
masligi kerak'; } if (empty($errors) ==
true) { move_uploaded_file($file_tmp,
$upload_folder . $file_name); echo "Yuk
landi"; } else { print_r($errors); } }
```

$_FILES super global

```php
Fayl yuklaganda 4 ta asosiy malumot kel
adi: $_FILES['file']['tmp_name'] – yukl
angan faylning serverdagi vaqtinchalik
nomi $_FILES['file']['name'] – yuklanga
n faylning nomi $_FILES['file']['size']
– yuklangan faylning baytlardagi hajmi
$_FILES['file']['type'] – yuklangan fay
lning MIME type
```
